

PUBLIC CLOUD CREATING AN INSTANCE IN SALESFORCE

AIM:

Develop a simple application to understand the concept of PAAS using Sales force

PROCEDURE:

- 1.Log in to your Salesforce account.
- 2.Click Setup at the upper-right corner.
- 3.Under the Build section, click Create and select Objects.
- 4.To create a custom object, click New Custom Object.
- 5.Enter the name of the Custom Object in Label, Plural Label, and Object Name.
- 6.Choose the custom apps for which the new Custom tab is required and click Save.
- 7.Select whether you want to define a custom app or a Salesforce console.
- 8.Give the app a name and description. An app name can have a maximum of 40 characters, including spaces. Click Save.

OUTPUT:

The screenshot displays the 'New Custom Object' configuration page in Salesforce. At the top, there's a navigation bar with 'Setup', 'Home', and 'Object Manager'. Below this, the 'New Custom Object' title is prominent. A yellow warning banner states: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Click to show this message again.](#)'

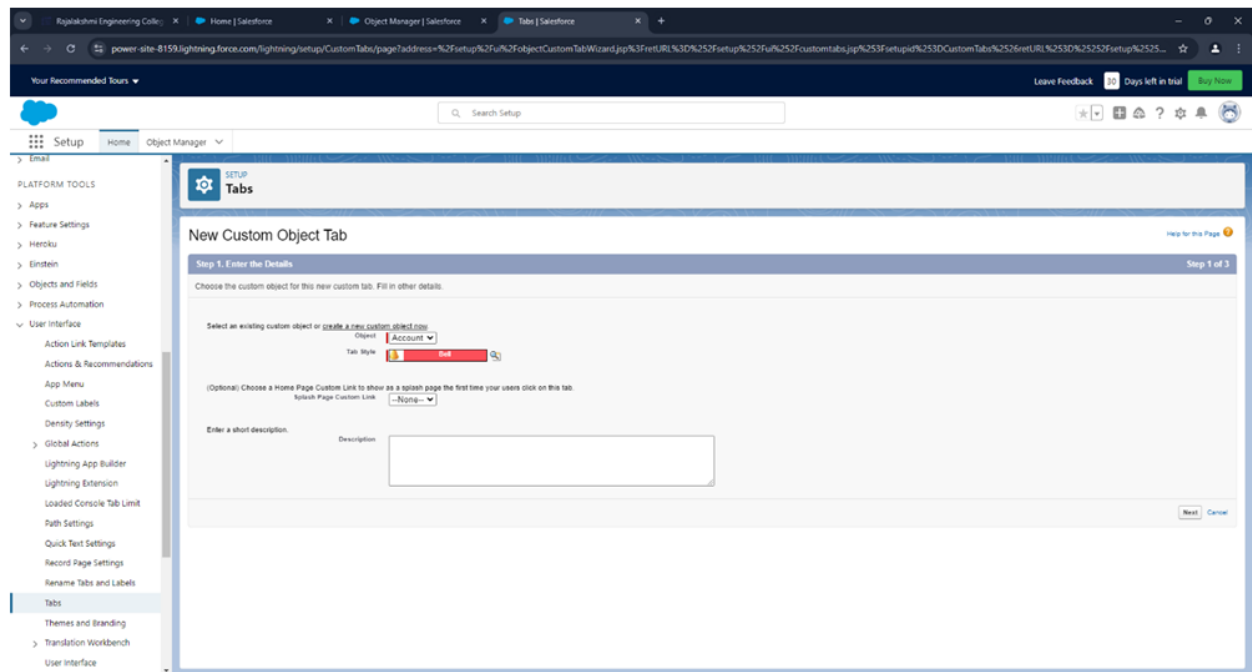

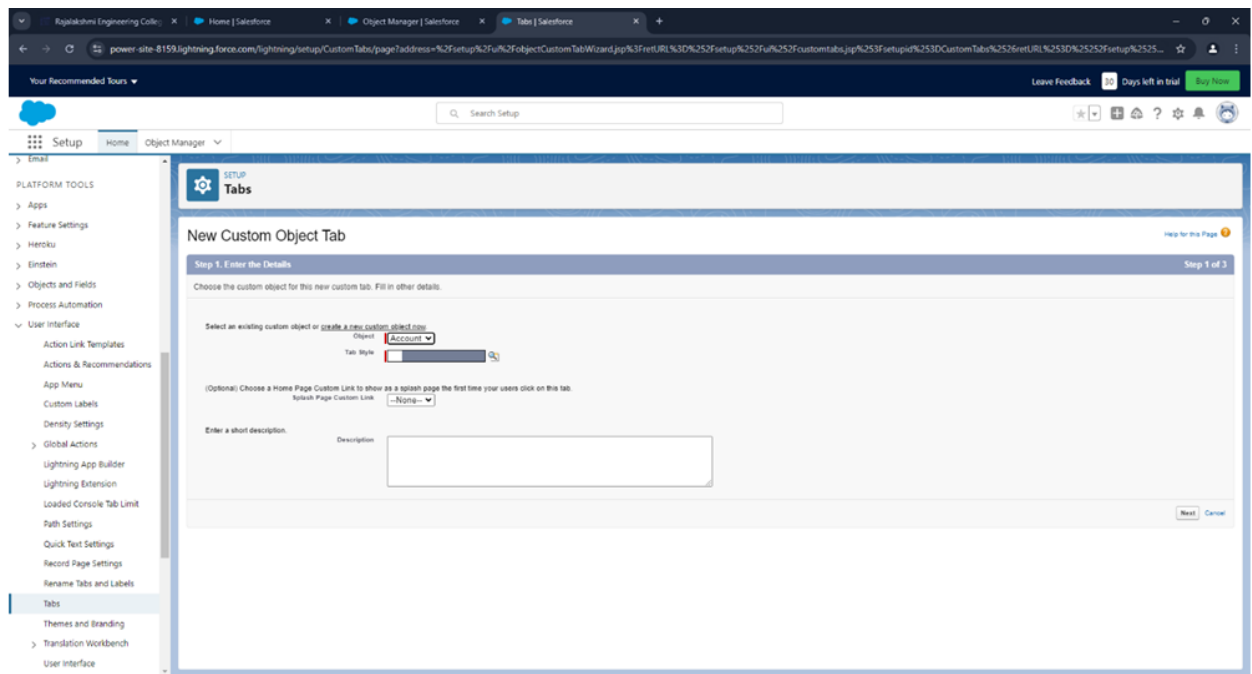

The main section is 'Custom Object Definition Edit', which includes a 'Custom Object Information' sub-section. This section contains the following fields and options:

- Label:** A text field with 'Account' entered. An example 'Example: Account' is shown.
- Plural Label:** A text field with 'Accounts' entered. An example 'Example: Accounts' is shown.
- Starts with vowel sound:** An unchecked checkbox.
- The Object Name is used when referencing the object via the API:** A text field with 'Account' entered. An example 'Example: Account' is shown.
- Description:** A large text area.
- Context Sensitive Help Setting:** Two radio buttons: 'Open the standard Salesforce.com Help & Training window' (selected) and 'Open a window using a Visualforce page'.
- Custom Name:** A dropdown menu showing 'Account'.

Below this is the 'Enter Record Name Label and Format' section. It includes a text field for 'Record Name' with 'Account Name' entered and an example 'Example: Account Name'. A note states: 'The Record Name appears in page layouts, key lists, related lists, tooltips, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.'

The 'Data Type' is set to 'Text'. A warning message reads: 'Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.'

At the bottom, the 'Optional Features' section includes two checkboxes: 'Allow Reports' (checked) and 'Allow Activities' (unchecked).
